□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□□
□□□□□□□□□□□

---

1. □□□□ Singleton□

**□□□□ **□□□□□□□□□□□□□□□□□□□□□□□□□□ `AddSingleton`□□□

```csharp
public interface IAppConfig { string Get(string key); }
public class AppConfig : IAppConfig
{
    public string Get(string key) => "value";
}
// □□
services.AddSingleton<IAppConfig, AppConfig>();
```

---

2. □□□□ /□□□□ Factory/AbstractFactory□

**□□□□ **□□□□□□□ DbContext□□□□□□

```csharp
public interface IRepositoryFactory
{
    IRepository<T> Create<T>() where T : class;
}
public class RepositoryFactory : IRepositoryFactory
{
    private readonly IServiceProvider _provider;
    public RepositoryFactory(IServiceProvider provider) { _provider = provider; }
    public IRepository<T> Create<T>() where T : class =>
_provider.GetRequiredService<IRepository<T>>();
}
// □□
services.AddScoped<IRepositoryFactory, RepositoryFactory>();
```

---

3. □□□□□□ Strategy□

**□□□□□ **□□□□□□□□□□□□□□□□□□□□□

```csharp
public interface IPaymentStrategy { void Pay(); }
public class AlipayStrategy : IPaymentStrategy { public void Pay() { /*...*/ } }
public class WeChatPayStrategy : IPaymentStrategy { public void Pay() { /*...*/ } }

public class PaymentContext
{
    private readonly IPaymentStrategy _strategy;
    public PaymentContext(IPaymentStrategy strategy) { _strategy = strategy; }
    public void ExecutePay() => _strategy.Pay();
}
// □□
services.AddTransient<IPaymentStrategy, AlipayStrategy>();
services.AddTransient<PaymentContext>();
```

---

4. □□□□□□□ Decorator□

**□□□□□ **□ AOP□□□□□□□□□□□

```csharp
public class LoggingRepository<T> : IRepository<T>
{
    private readonly IRepository<T> _inner;
    public LoggingRepository(IRepository<T> inner) { _inner = inner; }
    public void Add(T entity) { Console.WriteLine("□□  "); _inner.Add(entity); }
}
// □□
services.Decorate(typeof(IRepository<>), typeof(LoggingRepository<>)); // □□  Scrutor□□
```

---

5. □□□□□□□ Observer□

**□□□□□ **□□□□□□□□□□□□

```csharp
public interface IEventHandler<T> { void Handle(T evt); }
```

```
public class EventBus
{
    private readonly IEnumerable<IEventHandler<object>> _handlers;
    public EventBus(IEnumerable<IEventHandler<object>> handlers) { _handlers = handlers; }
    public void Publish<T>(T evt)
    {
        foreach (var h in _handlers.OfType<IEventHandler<T>>()) h.Handle(evt);
    }
}
// □□
services.AddSingleton<EventBus>();
```

---

6. □□□□□□ Chain of Responsibility□

**□□□□ **□□□□□□□□□□□□□□

```csharp
public interface IHandler { Task Handle(RequestContext ctx); }
public class AuthHandler : IHandler
{
    private readonly IHandler _next;
    public AuthHandler(IHandler next) { _next = next; }
    public async Task Handle(RequestContext ctx) { /*...*/ await _next.Handle(ctx); }
}
// □□□
services.AddTransient<IHandler, AuthHandler>();
```

---

7. □□□□□□ Adapter□

**□□□□ **□□□□□□□□□□□□□□□□□□□□□□□□

```csharp
public class AlipayAdapter : IPaymentStrategy
{
    private readonly AlipayService _alipay;
    public AlipayAdapter(AlipayService alipay) { _alipay = alipay; }
    public void Pay() => _alipay.DoPay();
}
// □□
services.AddTransient<IPaymentStrategy, AlipayAdapter>();
```

---

8. □□□□□□ Proxy□

**□□□□ **□□□□□□□□□□□□□

```csharp
public class RepositoryProxy<T> : IRepository<T>
{
    private readonly IRepository<T> _inner;
    public RepositoryProxy(IRepository<T> inner) { _inner = inner; }
    public void Add(T entity) { /*□□□□ */ _inner.Add(entity); }
}
// □□
services.Decorate(typeof(IRepository<>), typeof(RepositoryProxy<>));
```

---

9. □□□□□□ Command□

**□□□□ **□□□□□□□□□□□□□

```csharp
public interface ICommand { void Execute(); }
public class CreateOrderCommand : ICommand { public void Execute() { /*...*/ } }
public class CommandInvoker
{
    private readonly IEnumerable<ICommand> _commands;
    public CommandInvoker(IEnumerable<ICommand> commands) { _commands = commands; }
    public void ExecuteAll() { foreach (var cmd in _commands) cmd.Execute(); }
}
// □□
services.AddTransient<ICommand, CreateOrderCommand>();
```

---

10. □□□□□□□□ Template Method□

**□□□□ **□□□□□□□□□□□□

```csharp
public abstract class BaseModule
{
    public void RegisterModule()
    {
```

```
        PreRegister();
        DoRegister();
        PostRegister();
    }
    protected virtual void PreRegister() { }
    protected abstract void DoRegister();
    protected virtual void PostRegister() { }
}
```

---

11. □□□□□□□ Builder□

**□□□□□ **□□□□□□□□□□□□□□□ SQL□ Http□□□

```csharp
public class DbContextBuilder
{
    private string _connStr;
    public DbContextBuilder UseSqlServer(string connStr) { _connStr = connStr; return this; }
    public MyDbContext Build() => new MyDbContext(_connStr);
}
```

---

12. □□□□□□ Flyweight□

**□□□□□ **□□□□□□□□□

```csharp
public class DbContextPool
{
    private readonly Dictionary<string, MyDbContext> _pool = new();
    public MyDbContext Get(string connStr)
    {
        if (!_pool.ContainsKey(connStr))
            _pool[connStr] = new MyDbContext(connStr);
        return _pool[connStr];
    }
}
```

---

13. □□□□□□ Composite□

□□□□　　**□□□□□□□□□□□□□□□□**

```csharp
public interface IModuleComponent { void Init(); }
public class ModuleGroup : IModuleComponent
{

- **□□□□□**　　Domain Service□ **□ Manager □
- **□□□□**　Value Object□ **□□**　Money□ Address

---

27. □□□□□□　　Null Object□

□□□□　　**□□□**　null □□□

```csharp
public class NullLogger : ILogger
{
    public void Log(string msg) { /* □□□□□ */ }
}
```

---

28. □□□□□□Object Pool□

□□□□□DbContext□□□□□

```csharp
public class DbContextPool
{
    private readonly Queue<MyDbContext> _pool = new();
    public MyDbContext Rent() => _pool.Count > 0 ? _pool.Dequeue() : new MyDbContext();
    public void Return(MyDbContext ctx) => _pool.Enqueue(ctx);
}
```

---

29. □□□□□Lazy Load□

□□□□□□□□□□□

```csharp
public class User
{
    private Lazy<List<Order>> _orders;
    public User(Func<List<Order>> orderFactory)
    {
        _orders = new Lazy<List<Order>>(orderFactory);
    }
    public List<Order> Orders => _orders.Value;
}
```

---

30. □□□□□□

- **□□□**□□□□□□□□□□□DAO□□□□□□□
- **□□□**□□□□□□□□□□□□□□□□□□□
- **□□□**□□□□□□□□□□□

- **事件 /消息 **：观察者、发布 -订阅、中介者
- **第三方集成 **：适配器、桥接、外观
- **配置 /缓存 **：单例、享元、备忘录、原型
- **模块化 **：组合、模板方法、访问者

总结

- 你可以在 **仓储、服务、事件、支付、配置、模块、管道 **等各层灵活实践上述设计模式。
- 推荐用依赖注入和实例对象，避免静态。
- 设计模式不是越多越好，而是要理解其思想，按需组合。

如需某个模式的详细实现或在你框架中的最佳实践代码，欢迎继续提问！
